

The EECC Roadshow: "RFID at My Company"

How does RFID work in daily business? What does the technology cost? What concrete advantages does it offer my company? These questions are best answered with a real-world test. The EECC thus offers individual RFID workshops at the customer's goods-out department. The offer includes a demonstration on the loading ramp, a presentation of the A and B starter kits, an introduction to RFID technology and a workshop that includes the material package "Error-free Implementation / Conversion to Quality Assurance".

Programme:

10:00h Arrival / set-up

10:30h **Transponders and starter kits**
RFID essentials and how RFID functions
Which starter kit version makes the best sense?
Which transponders can be used?
What is important when locating the transponders?

11:15h **Real-world presentation on your loading ramp**
